1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10, 23, and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,876,117 to Chen. Chen discloses the claimed invention of a screw conveyor comprising a plurality of screw flights 20 and 22. The screw flights of the two screws clearly extend in different radial distances from the longitudinal axes of the conveyor. The screw flight of the shorter screw 20 also clearly extends continuously along the full length of the screw. The relative distances of the two screws are considered to be matters of obvious design choice to one of ordinary skill in the art. No criticality or unexpected results are seen or have been disclosed for the radially shorter of the screw flights extending in a range of 0.85 to 0.98 times the radius of the longer flight. Also, the recitations of the relative lengths and pitches of the screw flights are considered to be matters of obvious design choice to one of ordinary skill in the art.

3. Claims 11, 12, and 14-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,082,120 to Hoffman et al in view of Chen. Hoffman et al discloses the claimed invention of an ice cream maker with a screw conveyor in the freezing chamber. However, Hoffman et al does not disclose the screw conveyor as having two screw flights of different diameters. Chen teaches a screw conveyor having two screw flights 20 and 22 of different diameters, as discussed above. Thus, it would

be obvious to substitute, for the screw conveyor 47 of Hoffman et al, a screw conveyor of the type taught in Chen, to yield the predictable result that the ice cream mix is more evenly frozen in the freezing chamber.

4. Applicant's arguments with respect to claims 1, 11, 12, and 15 have been considered but are moot in view of the new ground(s) of rejection.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
